

notes on battery charging behavior

- charging started at 75%
- starts at 1-1.1A for 5-10s
- ramps up to 1.25-1.4A

-current draw after charging is complete:

What is max current draw of dino?

What is current draw of dino when charging is done?

Does current draw change if dino is switched on or switched off?

Does the raspi load the source, or is the only load on this circuit the USB battery pack?
